

Travel Safely with Confidence

What we are doing to protect your Comfort and Health during COVID-19

We would like to extend greetings and provide an update to all of our customers and friends. Hopefully you and your loved ones are keeping safe and staying healthy during these challenging times. This newsletter is to let you know the changes that we have implemented and that Beaver Bus Lines is very committed to providing a safe, clean and comfortable ride.

At the present time every person including the driver for their safety must wear a mandatory facemask or face shield when riding in our motorcoaches. This way, **Everybody** is protected.

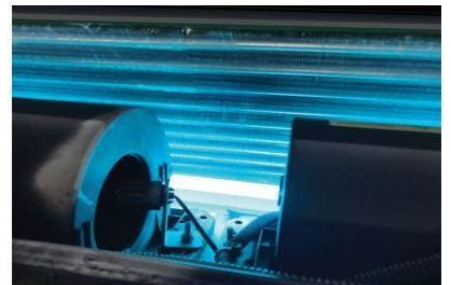

We have been working diligently to adapt our fleet to keep our customers as safe as possible in these challenging times. Our experienced cleaning staff is trained to thoroughly clean and disinfect all areas of contact. Also, here are some of the additional measures we've been taking:

HAND SANITIZERS: Every bus is equipped with a hand sanitizer located at the front entrance

AIRFLOW IN A BUS: The air in the interior of a motor coach is cleaned and filtered continuously as well as being exchanged with outside air every 10 minutes. Press control on your keyboard and then click on the link at the same time to open the link to view the video. It explains the air flow in a motor coach as it pertains to battling against any airborne virus.

UV-C LIGHT: We have currently outfitted all of our motor coaches with a UV-C light. Disinfection with UV Light is widely used in hospitals and laboratories to sanitize instruments and work surfaces to prevent the spread of potentially lethal infectious diseases. UV light is a chemical-free means of air purification which has been proven to kill 90% of microbial contaminants after 10 minutes of exposure and 99% after one hour.

HYGIENE FOGGER: HygieneFOG kills off the bacteria by causing the proteins to become damaged and bacterial cell wall to rupture. It demonstrated immediate bactericidal activity through and inhibit bacterial growth for 24 hours, eliminated 99.9% of bacterial including Staphylococcus Aureus and Escherichia Coli. Press control on your keyboard and then click on the link at the same time to open the link to view the video demonstrating how it works.
